in partnership with Safe Schools

VAPING PRODUCTS FREQUENTLY ASKED QUESTIONS

1. WHAT ARE VAPING PRODUCTS?

Vaping products are battery-powered devices that heat a liquid solution to create an aerosol (vapour/cloud).

Vaping products have many names such as: e-cigarettes, vapes, vape pens, mods (box or pod), tanks, e-hookahs and are also known by various brand names. These devices do not contain tobacco and do not involve burning. They consist of the following:

- Atomizer is also known as cartomizer or clearomizer
- Vaping liquid is also known as e-juice or e-liquid

2. WHAT VAPING DEVICES ARE MOST COMMONLY USED?

Original vaping devices mimicked the design of traditional cigarettes. However, newer generations of vaping products are more advanced and come in many shapes, sizes and styles. 'JUUL' and 'Aspire Breeze' are examples of vaping products that are now becoming very popular. They contain high amounts of nicotine, which are readily absorbed; thus providing a greater nicotine "hit".
